

Received from Kim Gilmore, Gilmore Marketing Concepts, Inc.

In reference to the bullet point:

- Employee intranet with plug-in capability for current systems.

What is the current system you want this to plug-in to?

- Adobe Acrobat and RSS feeds for social media and events calendar
- Must be able to support FormSmarts web forms, as that is what the college is currently using. If a new implementation features a different form software, we would be open to a potential migration away from formsmarts, if a new system were to integrate better with the new website.
- Ideally, a content management system that could integrate with Microsoft Active Directory Single Sign On Technology would be beneficial to the college long-term.
- Support for Target X web forms and Target X UChat would be needed for the new website
- Must support integration with Omnilert, the mass notification system the college uses for PSC Alert for severe weather closures or other campus notifications.

Is this intranet hosted on a school server?

- Our intranet is a Google site. The production server is on-site and the development server is hosted with our CMS provider.

Are you looking for the bidding company to create and install this intranet system?

- No, that is not an ask for this project.

Is this an internal website that can only be accessed on campus, or is this remote log in enabled or is it internet based with a log in system?

- It is a Google site that can be accessed on- and off-campus with SSO login credentials.

Are you wanting the bidding company to maintain this intranet system through an IT contract?

- No, we are not looking for the bidding company to maintain this intranet system.

In reference to the bullet point:

- Indexed document archiving and retrieval system

Are you looking for the bidding company to create/ install an archiving system with document storage?

- That will be up to the bidding company to decide if that's the best approach based on the respective proposal.

Will this be a cloud based system?

- No, not at this time.

How many documents do you estimate will be involved?

- We cannot provide a true estimate as we are continuing the evaluation of our existing website to either eliminate pages or move them to our intranet site, which would change the number of documents that will be involved. At this time, we have over a little over 800 assets including PDFs, forms and images.

Are you wanting the bidding company to maintain this document system through a contract?

- No, it is our design to maintain all systems along with the website to the fullest extent possible without having to contact a vendor for support.

Received from Amanda Danaher, American Eagle

1. Can you elaborate how TargetX is integrated with the current site? Is it just the link out to the applications process (https://psc-apply.force.com/application/TX_SiteLogin?startURL=%2Fapplication%2FTargetX_Portal_PB) or is the integration more complex?

- Target X is the custom app on Salesforce that we use for the online application. The website should just connect to it via a button url or link. There is no integration needed.
 - <https://psc-apply.force.com/application>

2. I noticed a number of subdomains like and standalone sites like <https://library.prairiestate.edu/> <http://catalog.prairiestate.edu/> and the athletics site. Are any of these subdomains or separate domains included in the scope of the project? If so, can you provide a full list of subdomains that we should be aware of?

- <https://library.prairiestate.edu/>
- <http://catalog.prairiestate.edu/> (The course curriculum catalog is maintained using Acalog.)
- <http://employee.prairiestate.edu/> (This site is not published since we are using a Google site for the intranet).

The Athletics site is not included in the scope of this project.

Received from Sean Sweeney, iFactory

1) to be 100% clear, you do not want to stay with the omni CMS and wish to move to a new CMS platform?

- We are open so long as our core objectives can be accomplished. The current team has experience with this platform only, and there may be other options available.

2) please confirm, you must GO LIVE by July / Aug of this year and there is no wiggle room for a later launch?

- We recognize that our timeline is ambitious. We are open to prioritizing the main pages of our site such as those focusing on an overview of the college, advising, enrollment, and financial aid. And with a solid foundation, we can continue to add on pages leveraging design templates or other elements from the vendor selected for this project.
